

Supplementary file 3. Definitions used for categorizing studies by main study outcome

Main study outcome	Definitions
Prevalence	Proportion/percentage of people with post-TB lung disorder among the general population
Proportion	Proportion/percentage of people with post-TB lung disorder among people with previous TB, limited to a specific study population e.g. hospital cohorts
Predictors/risk factors	Risk/odds of having post-TB lung disorder among people with and without certain risk factors
Co-morbidities/complications	Proportion of people with co-morbidities/ complications among people with post-TB lung disorder
Progression (longitudinal)	Proportion of people with post-TB lung disorder who deteriorate or improve over time
Management	Assessment of treatment options among people with post-TB lung disorder
Prevention	Assessment of an intervention to prevent (deterioration of) post-TB lung disorder
