

Logic Models

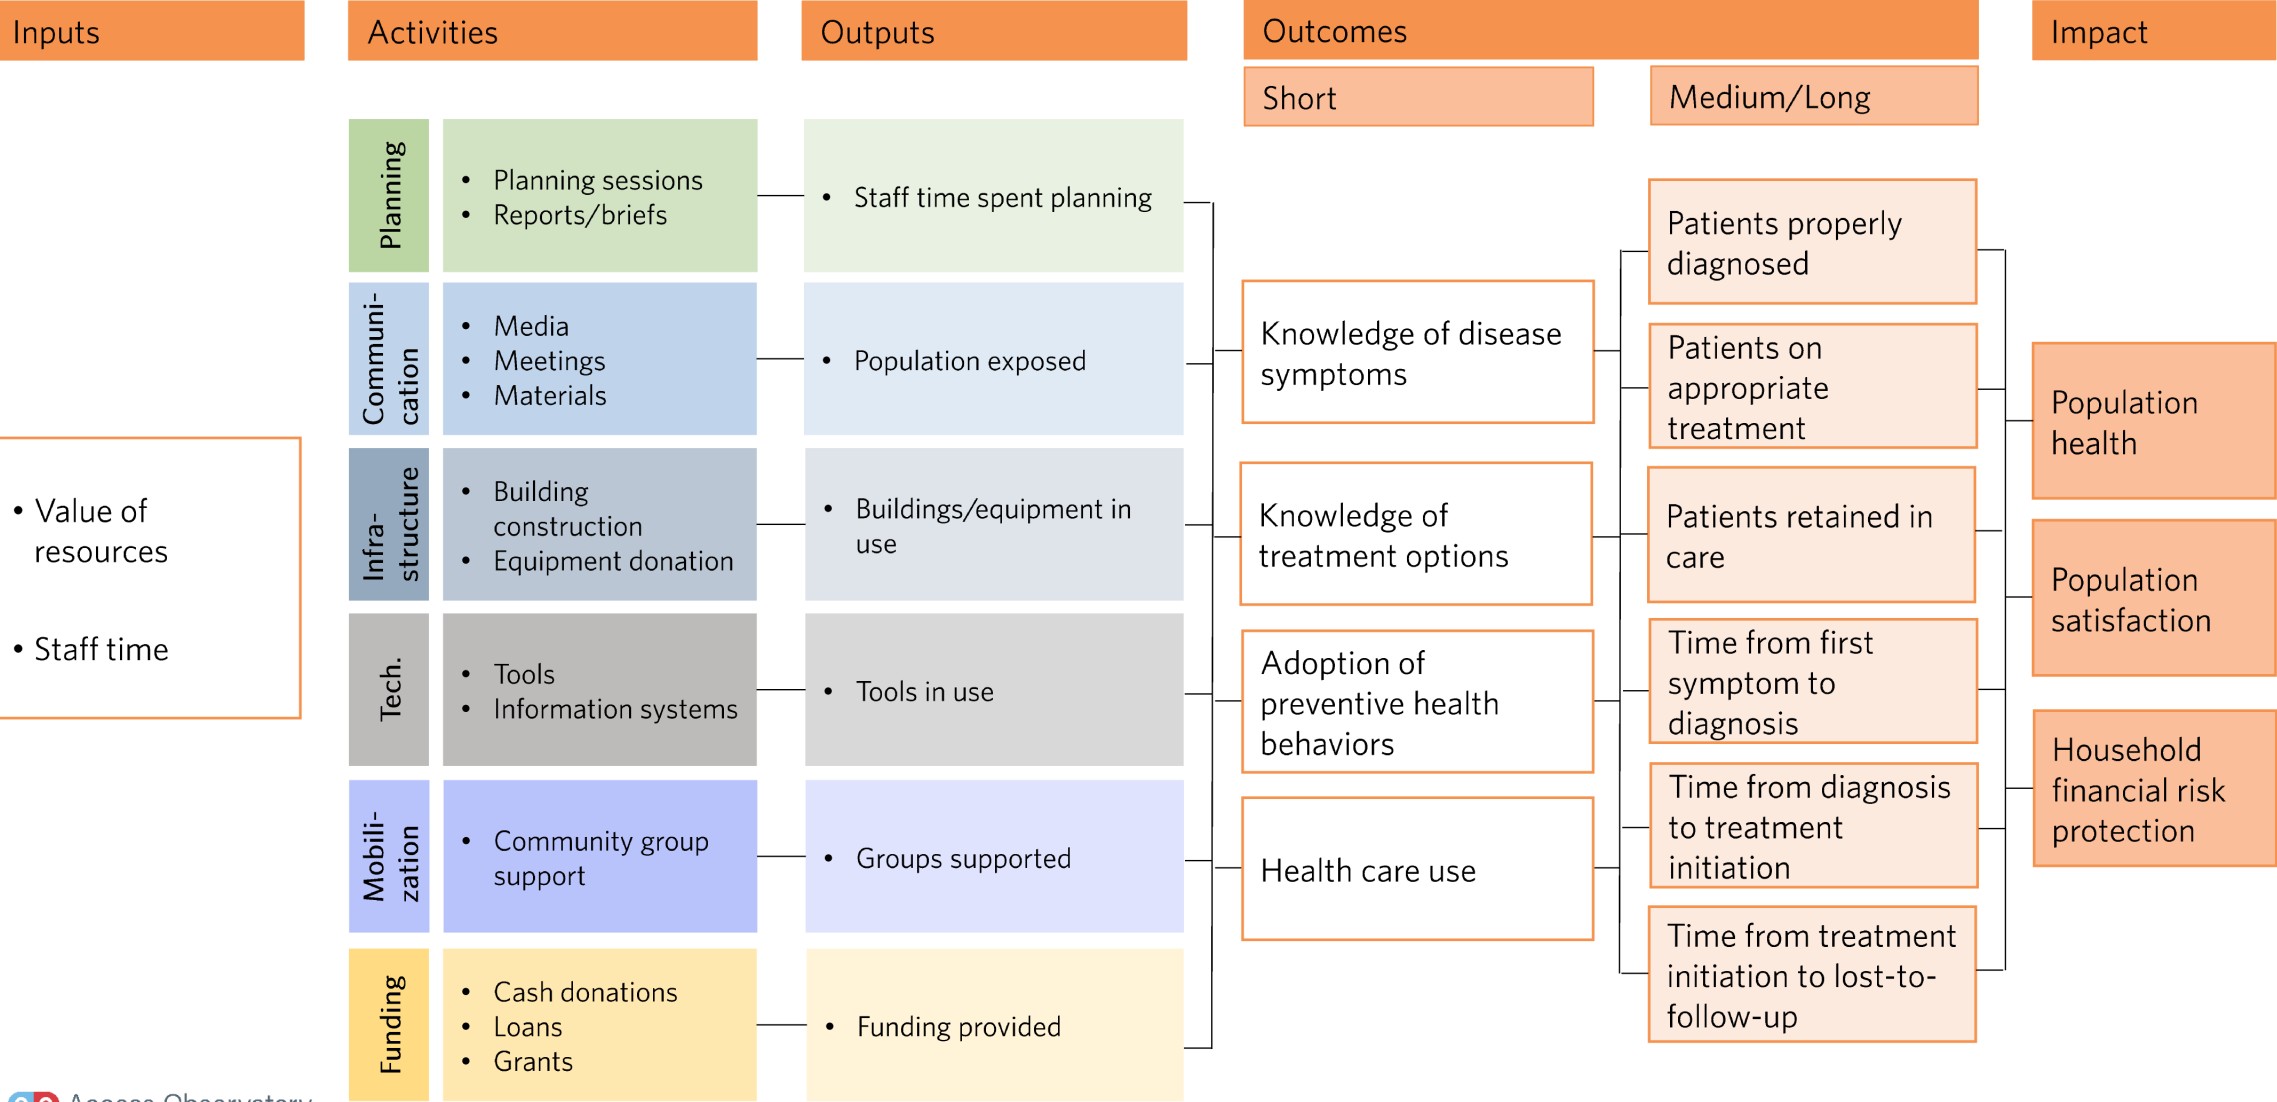

*Developed by the Access Observatory team at the Boston University School of Public Health. Members of Access Accelerated companies provided input and feedback during the development process.

Community Strategies

1. Community Awareness and Linkage to Care

Strategy: Community Awareness and Linkage to Care

Definition: Programs that provide communities and patients with health-related information on disease prevention and treatment, or improve links between patients and the health care system.

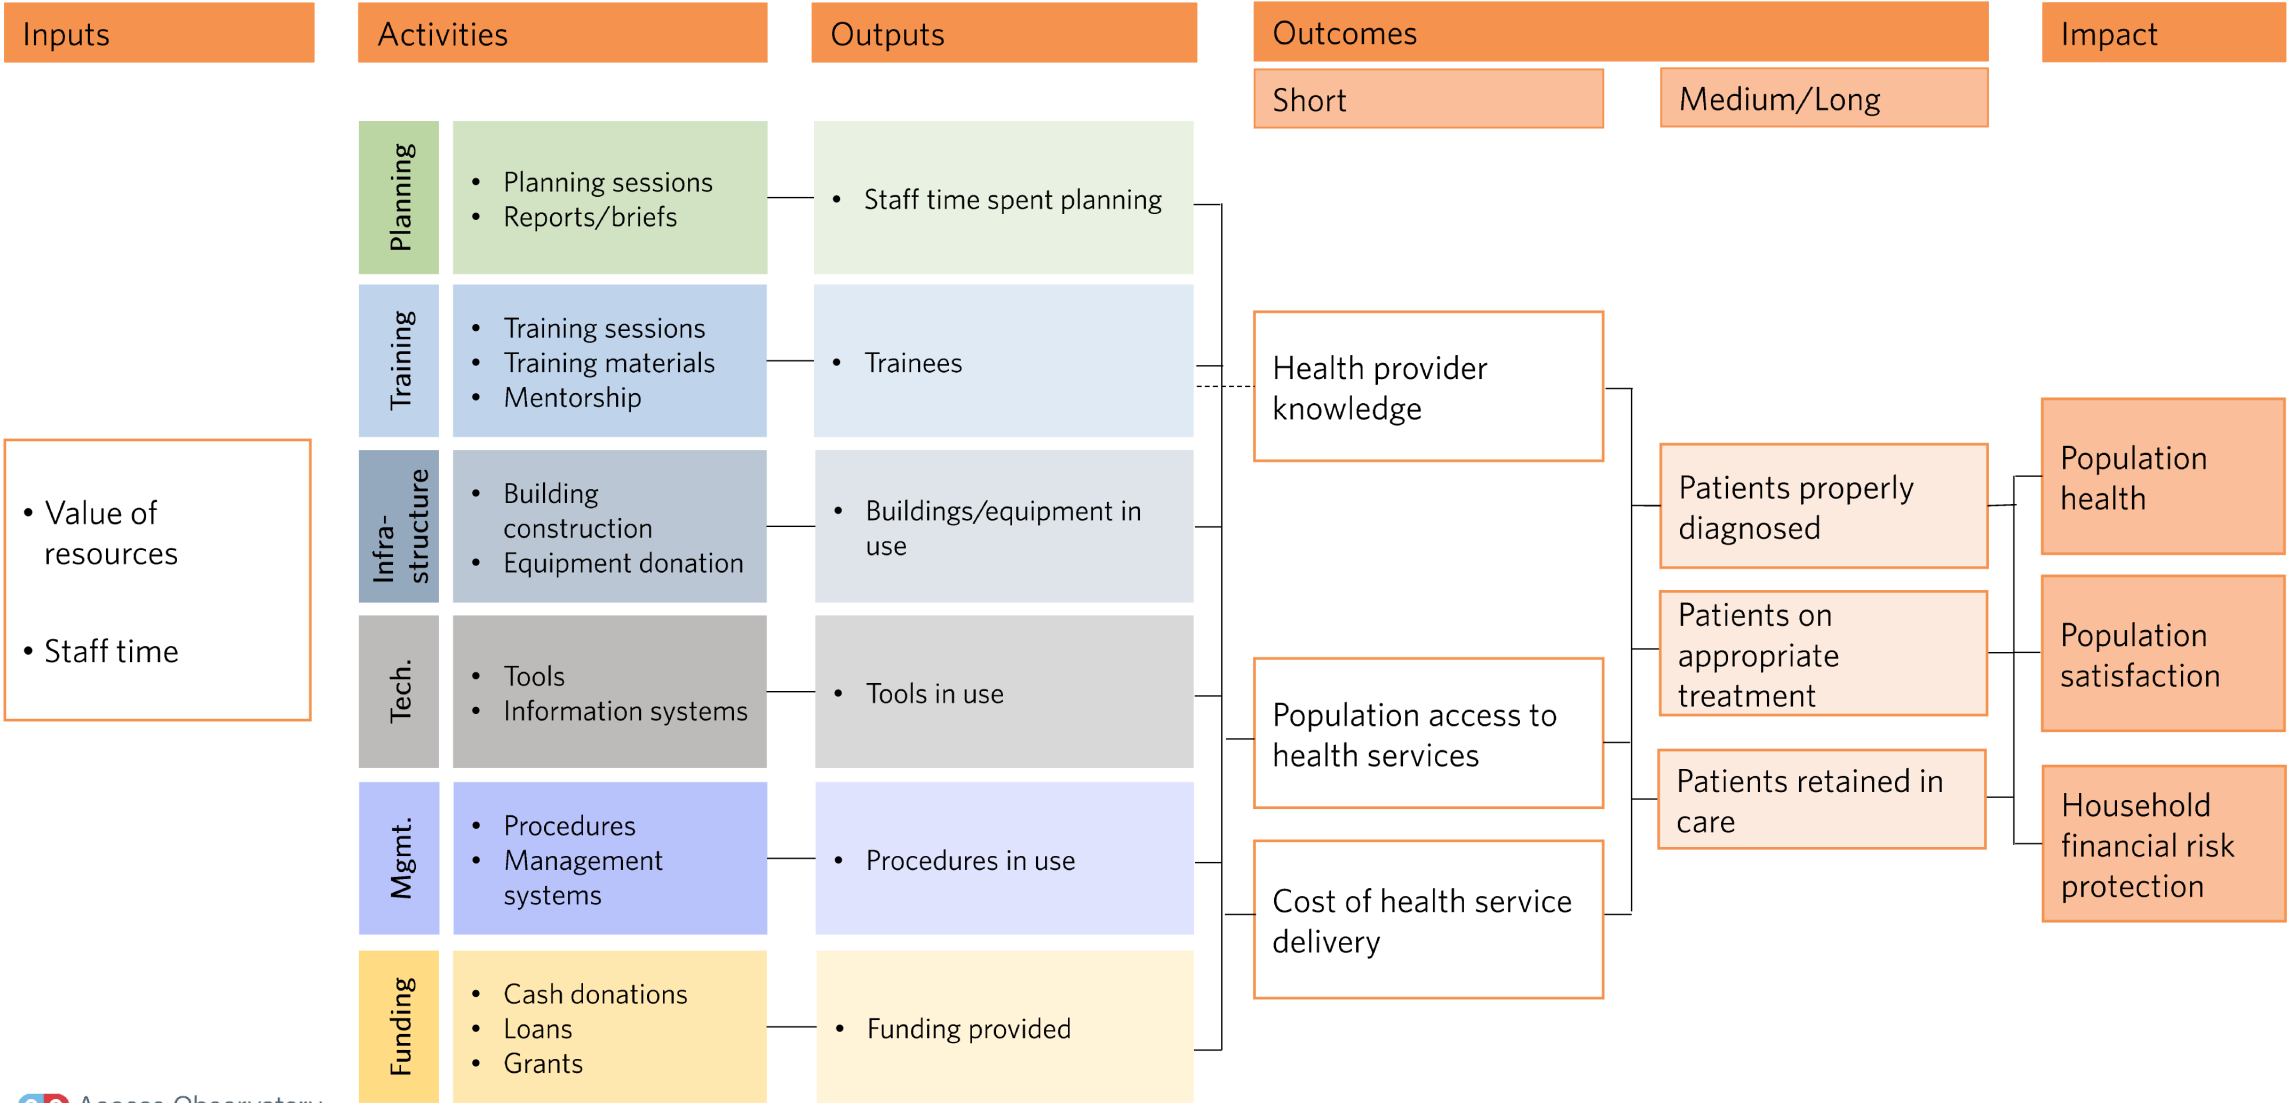

System Strategies

1. Health Service Strengthening
2. Health Service Delivery
3. Supply Chain
4. Financing
5. Regulation and Legislation

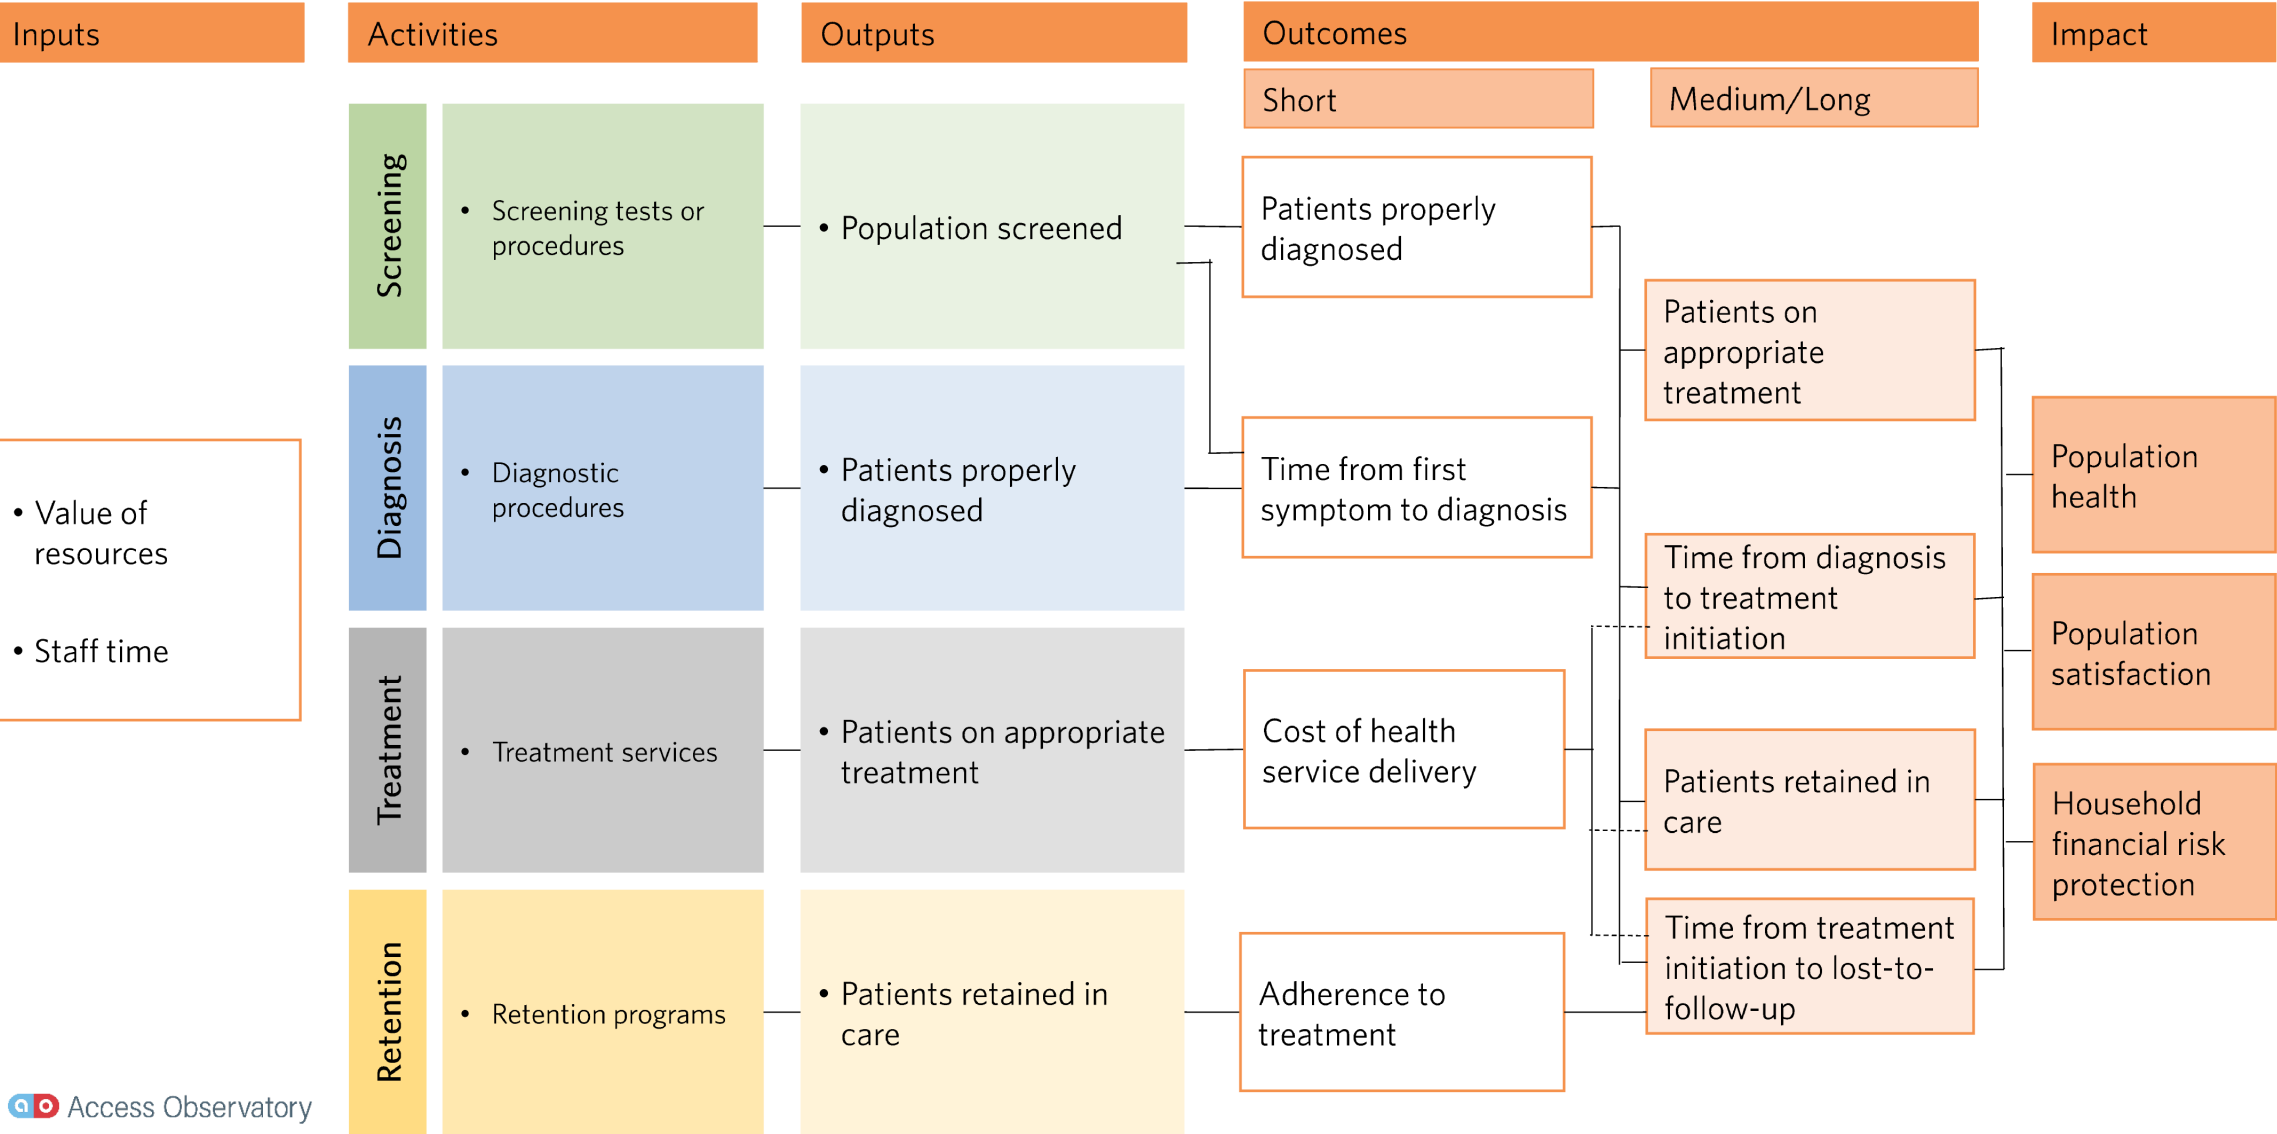

Strategy: Health Service Strengthening

Definition: Programs designed to improve the availability, affordability, and quality of health services.

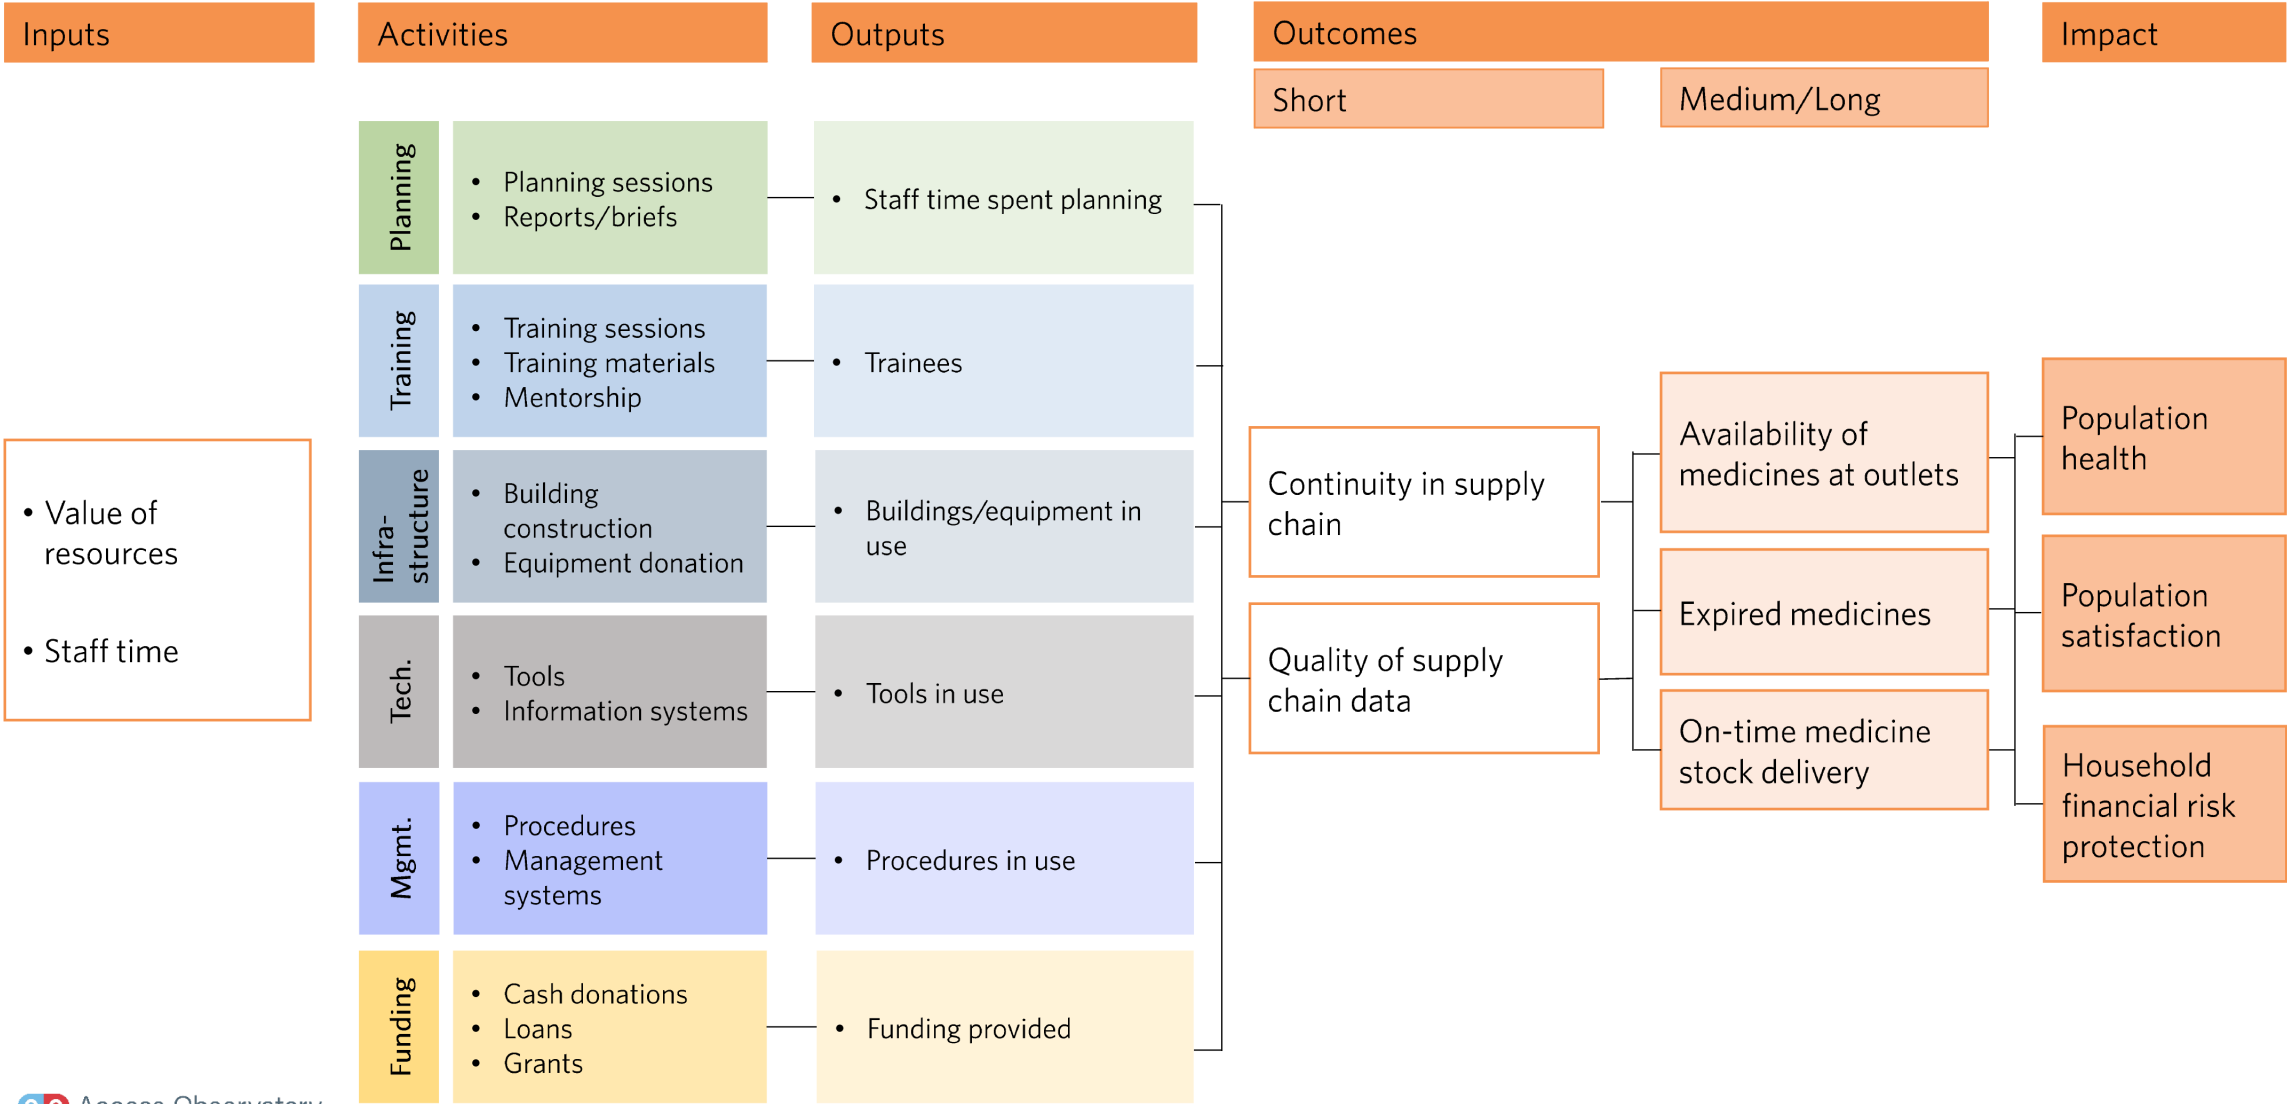

Strategy: Health Service Delivery

Definition: Programs designed to deliver health services directly to patients.

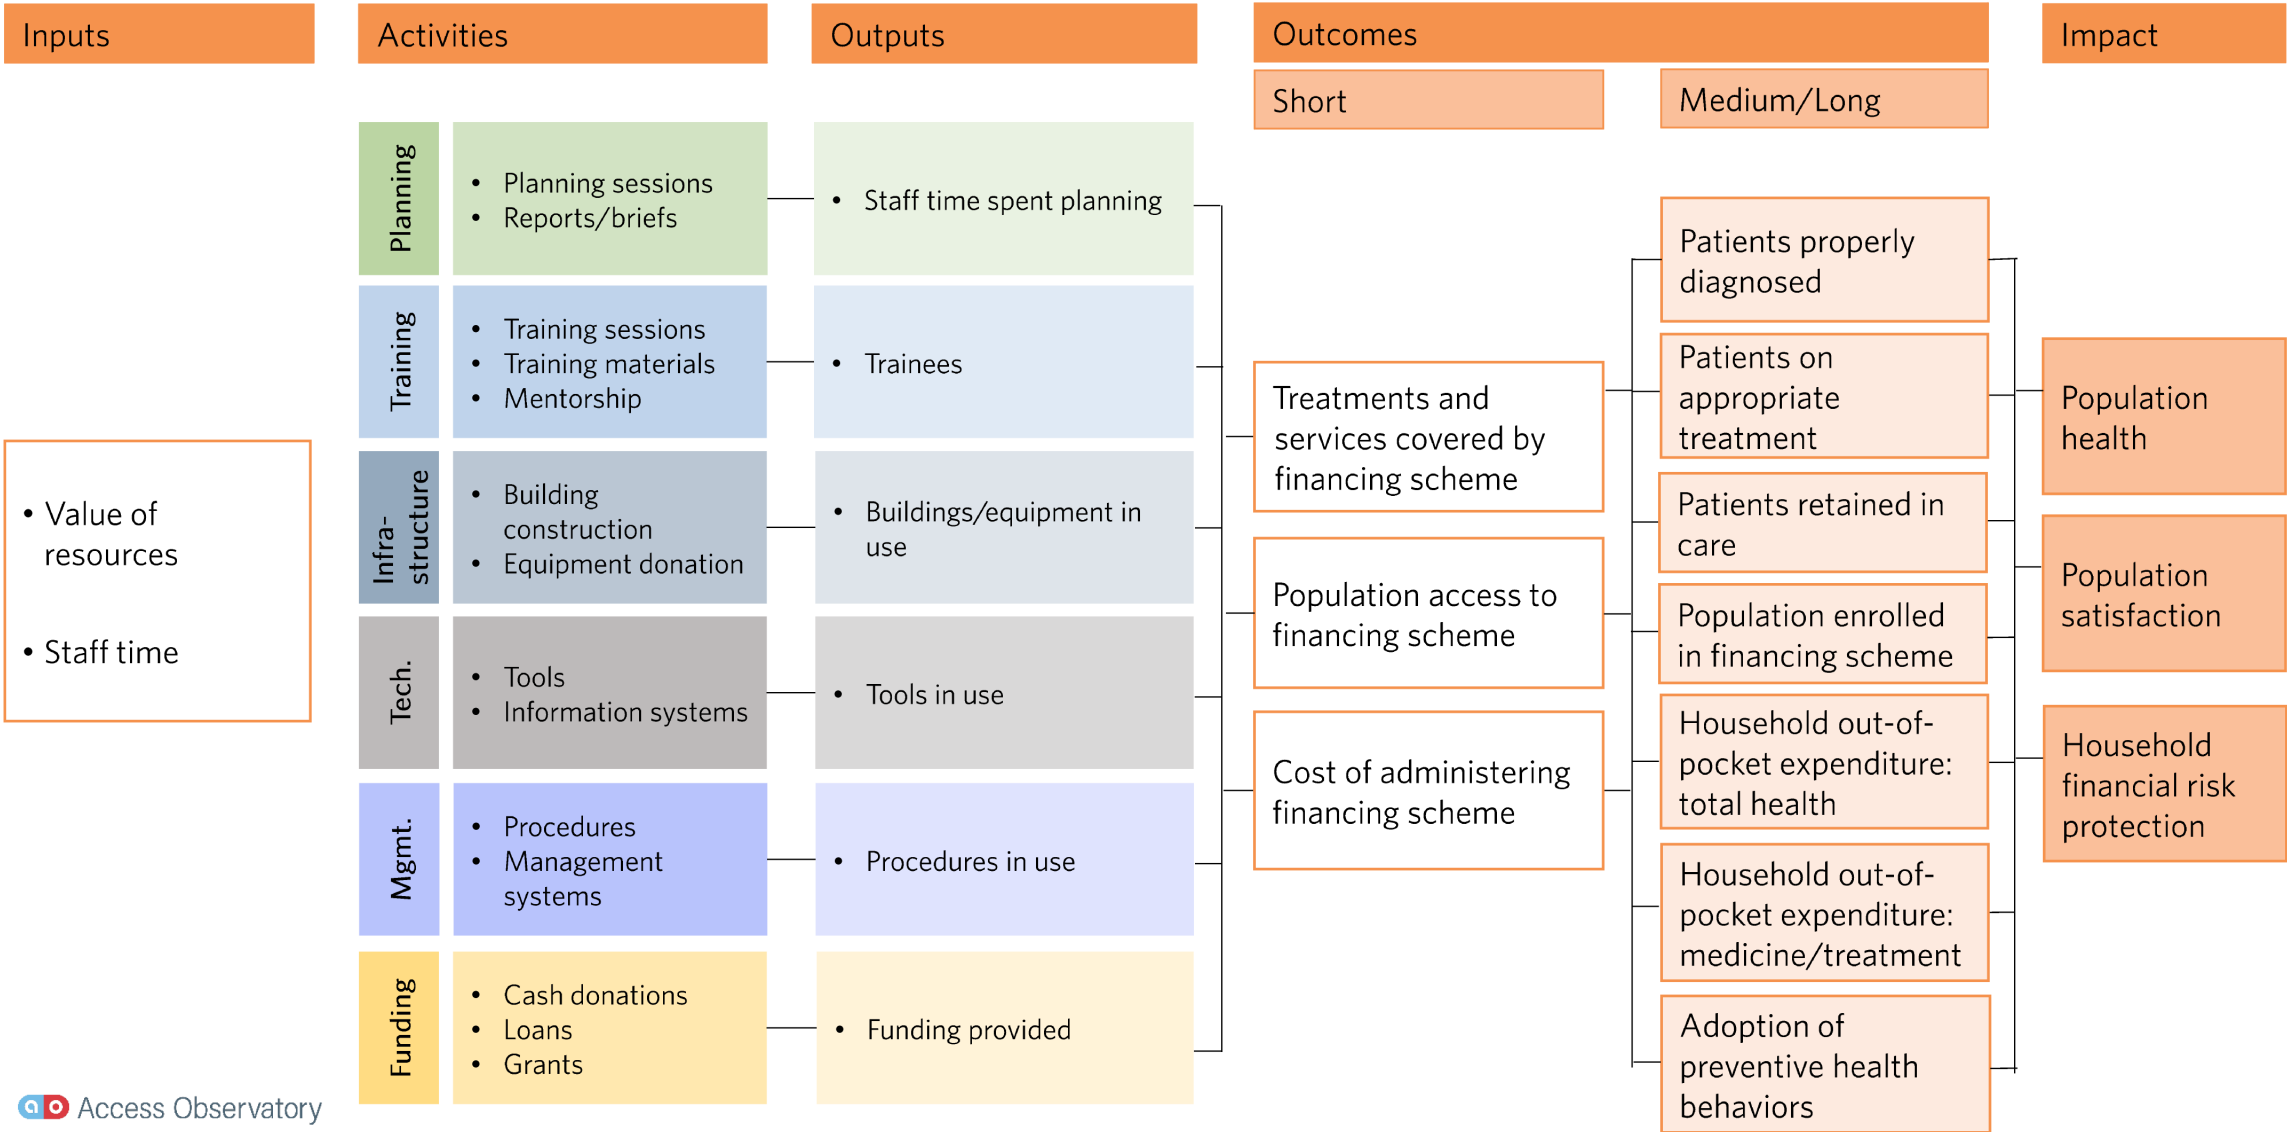

Strategy: Supply Chain

Definition: Programs designed to improve medicine supply chains, to improve availability and lower costs.

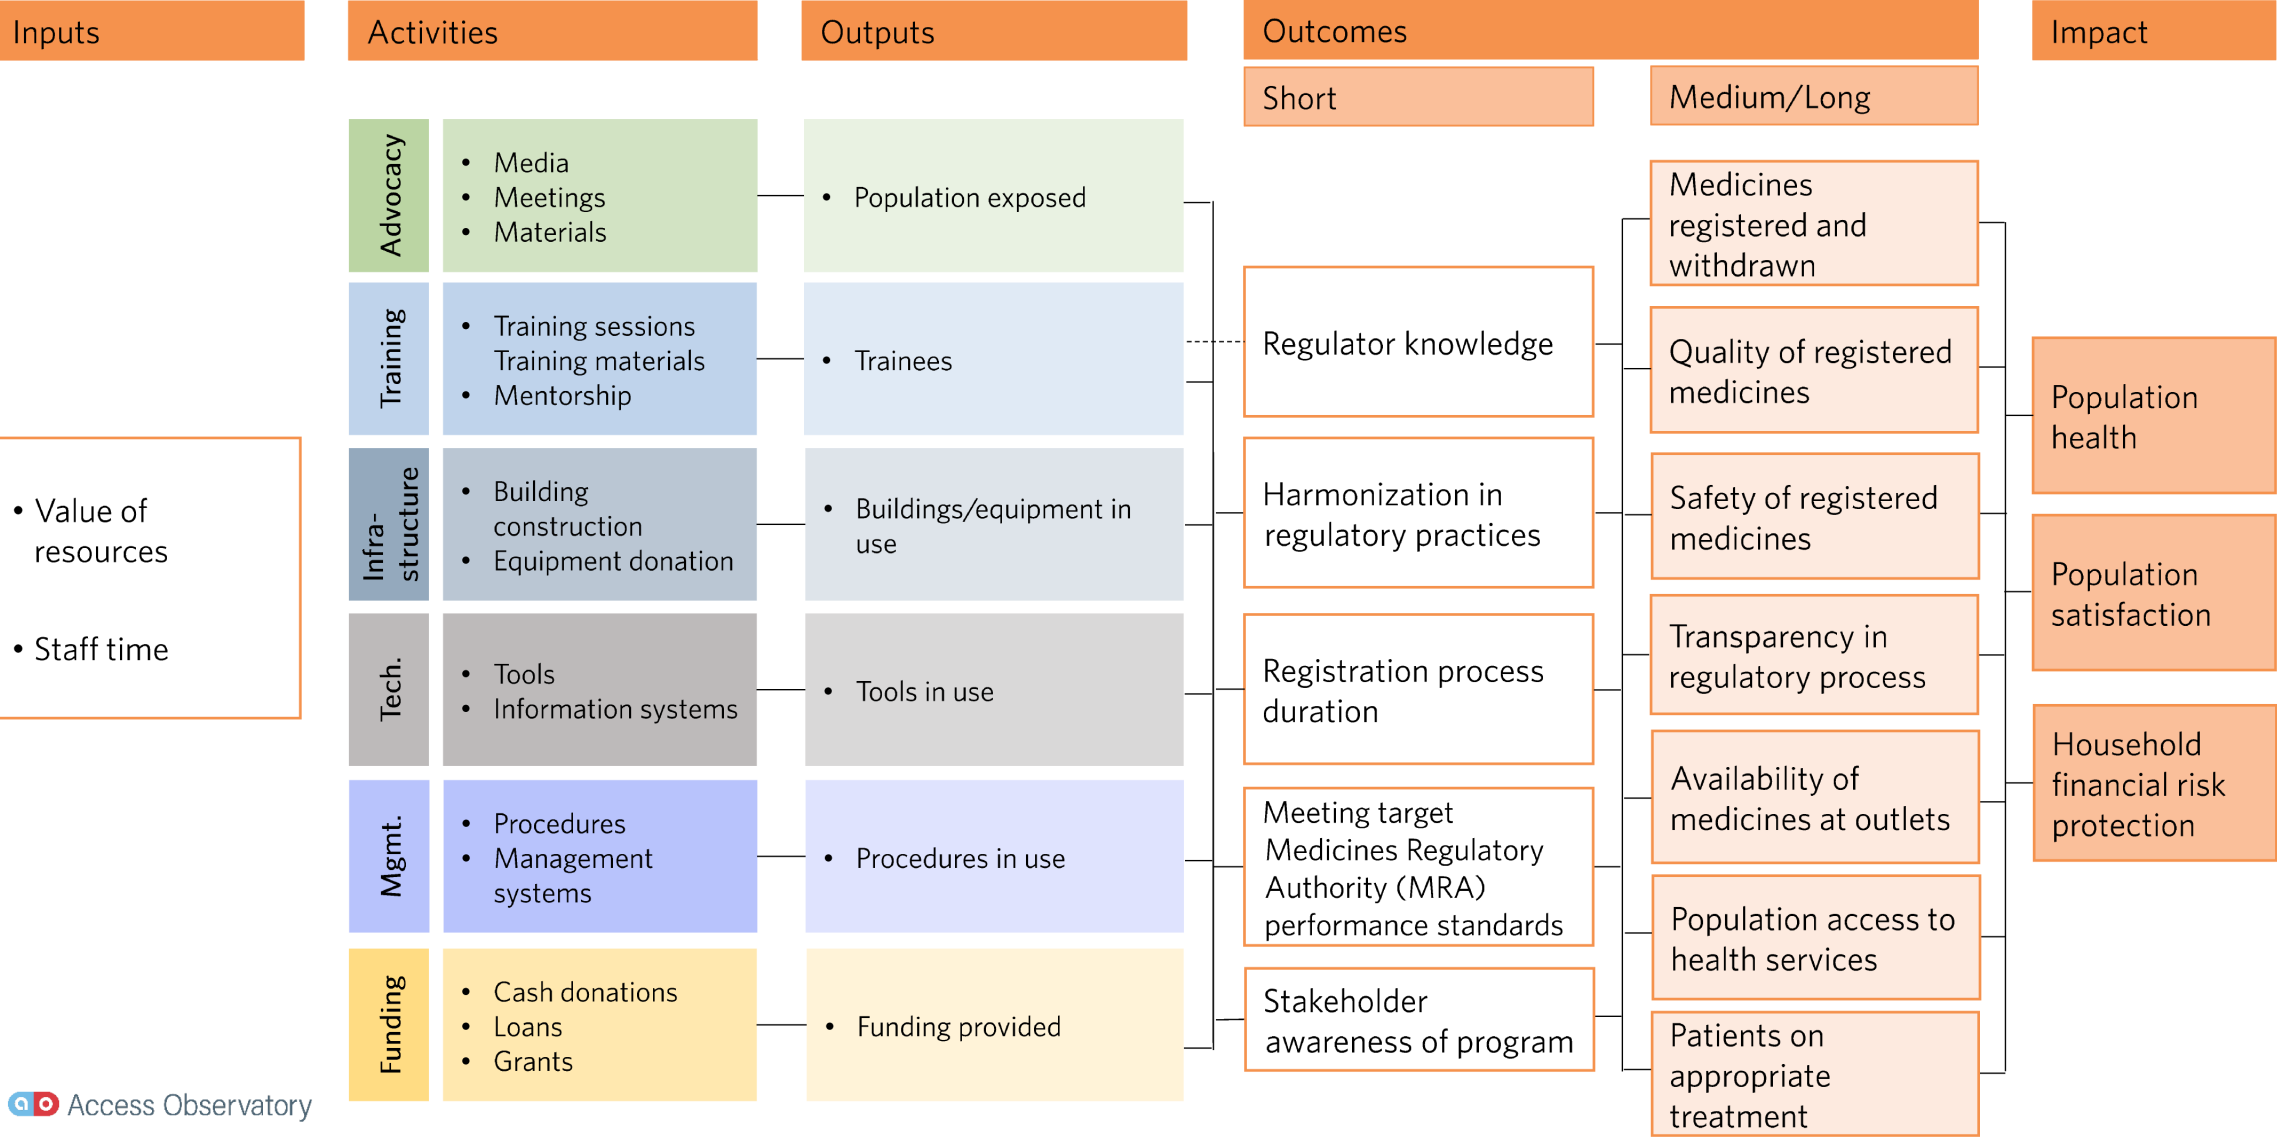

Strategy: Financing

Definition: Programs designed to improve health financing systems and reduce catastrophic health expenditure.

Strategy: Regulation and Legislation

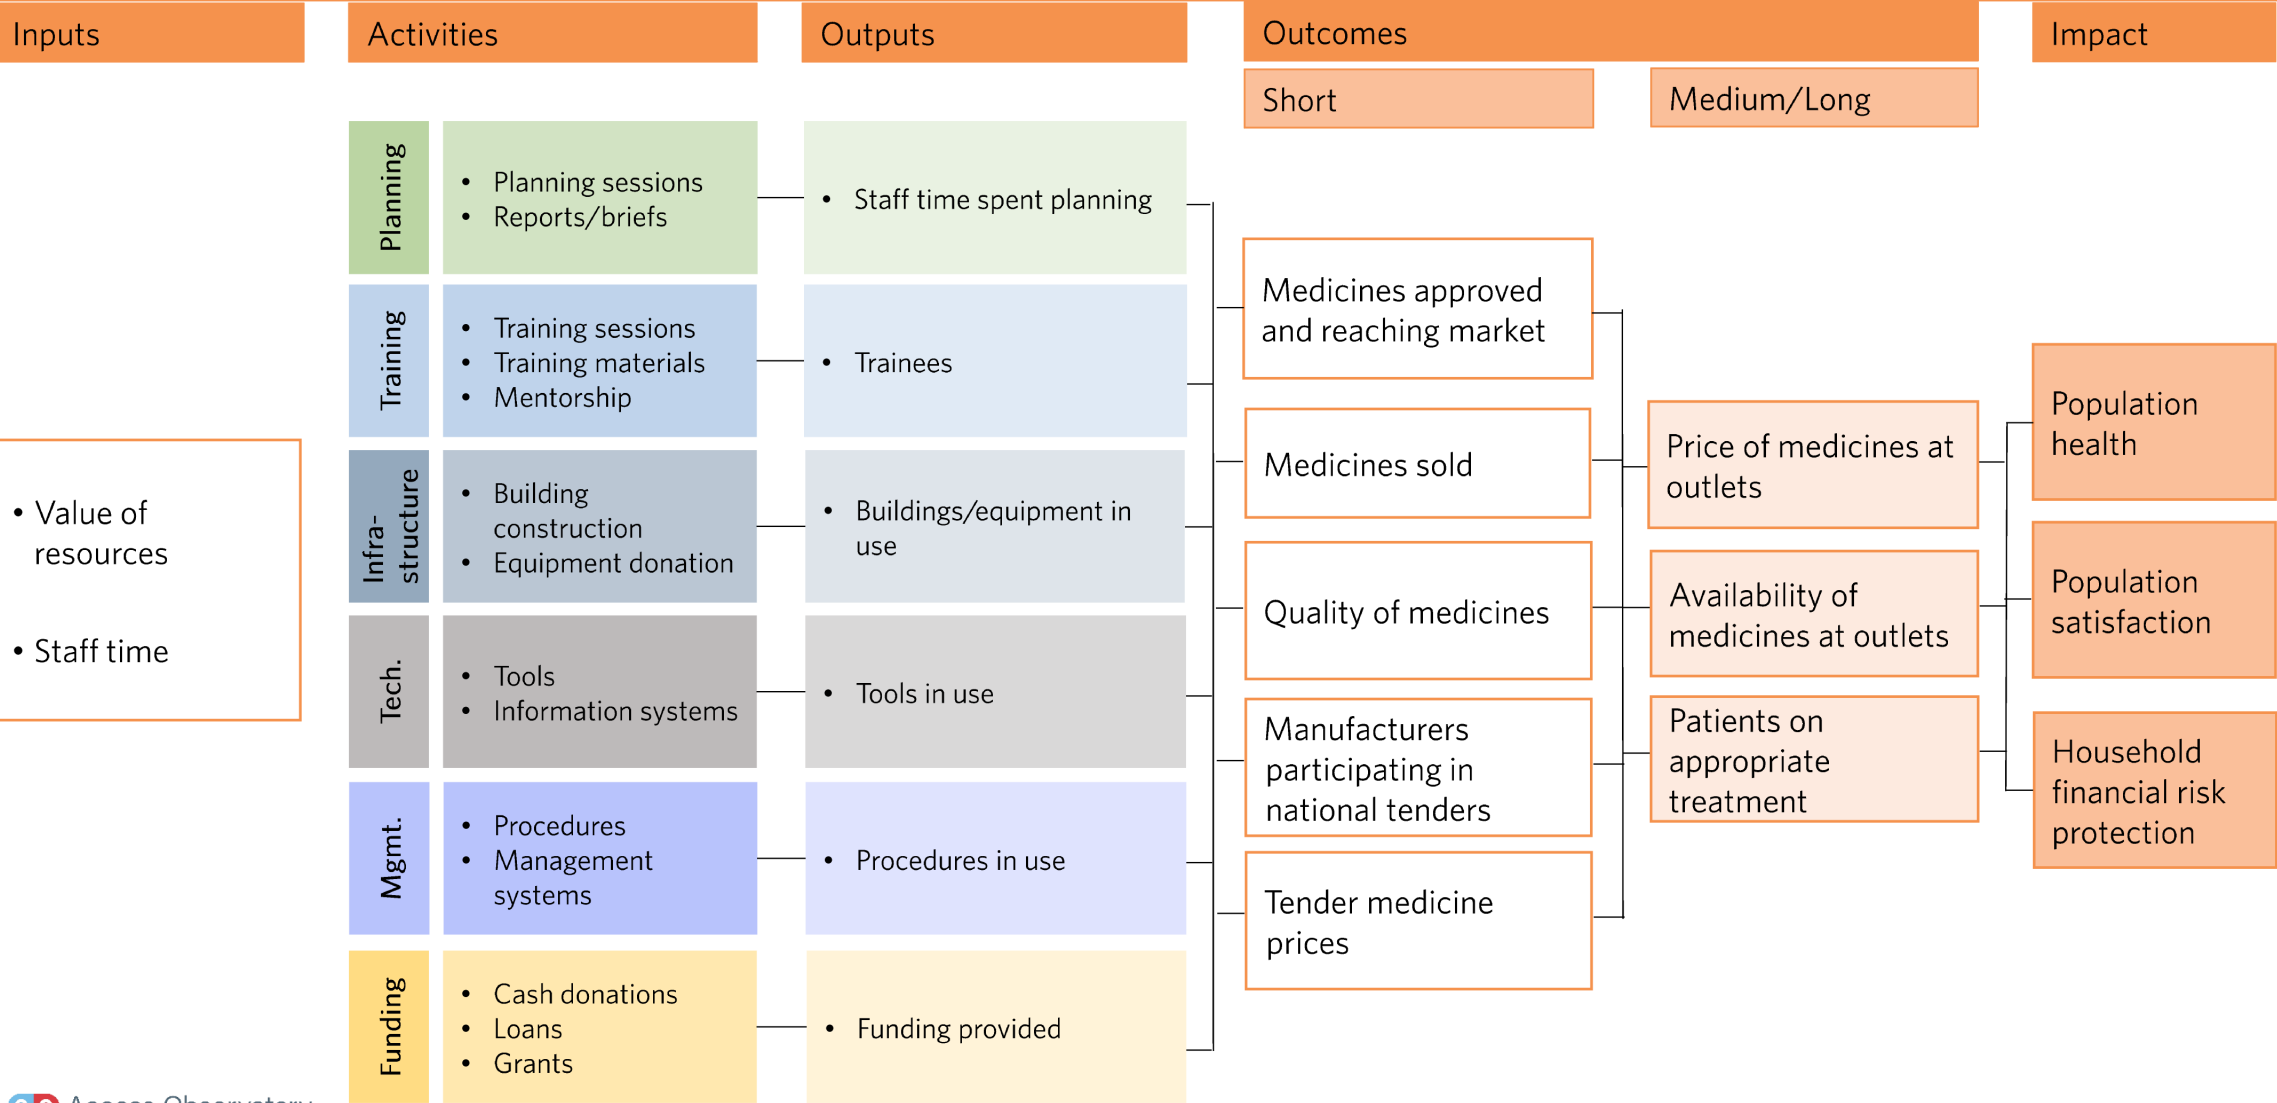

Definition: Programs designed to improve and harmonize pharmaceutical regulatory systems, improve government coverage of and access to treatments, and/or improve in-country regulatory processes.

Production Strategies

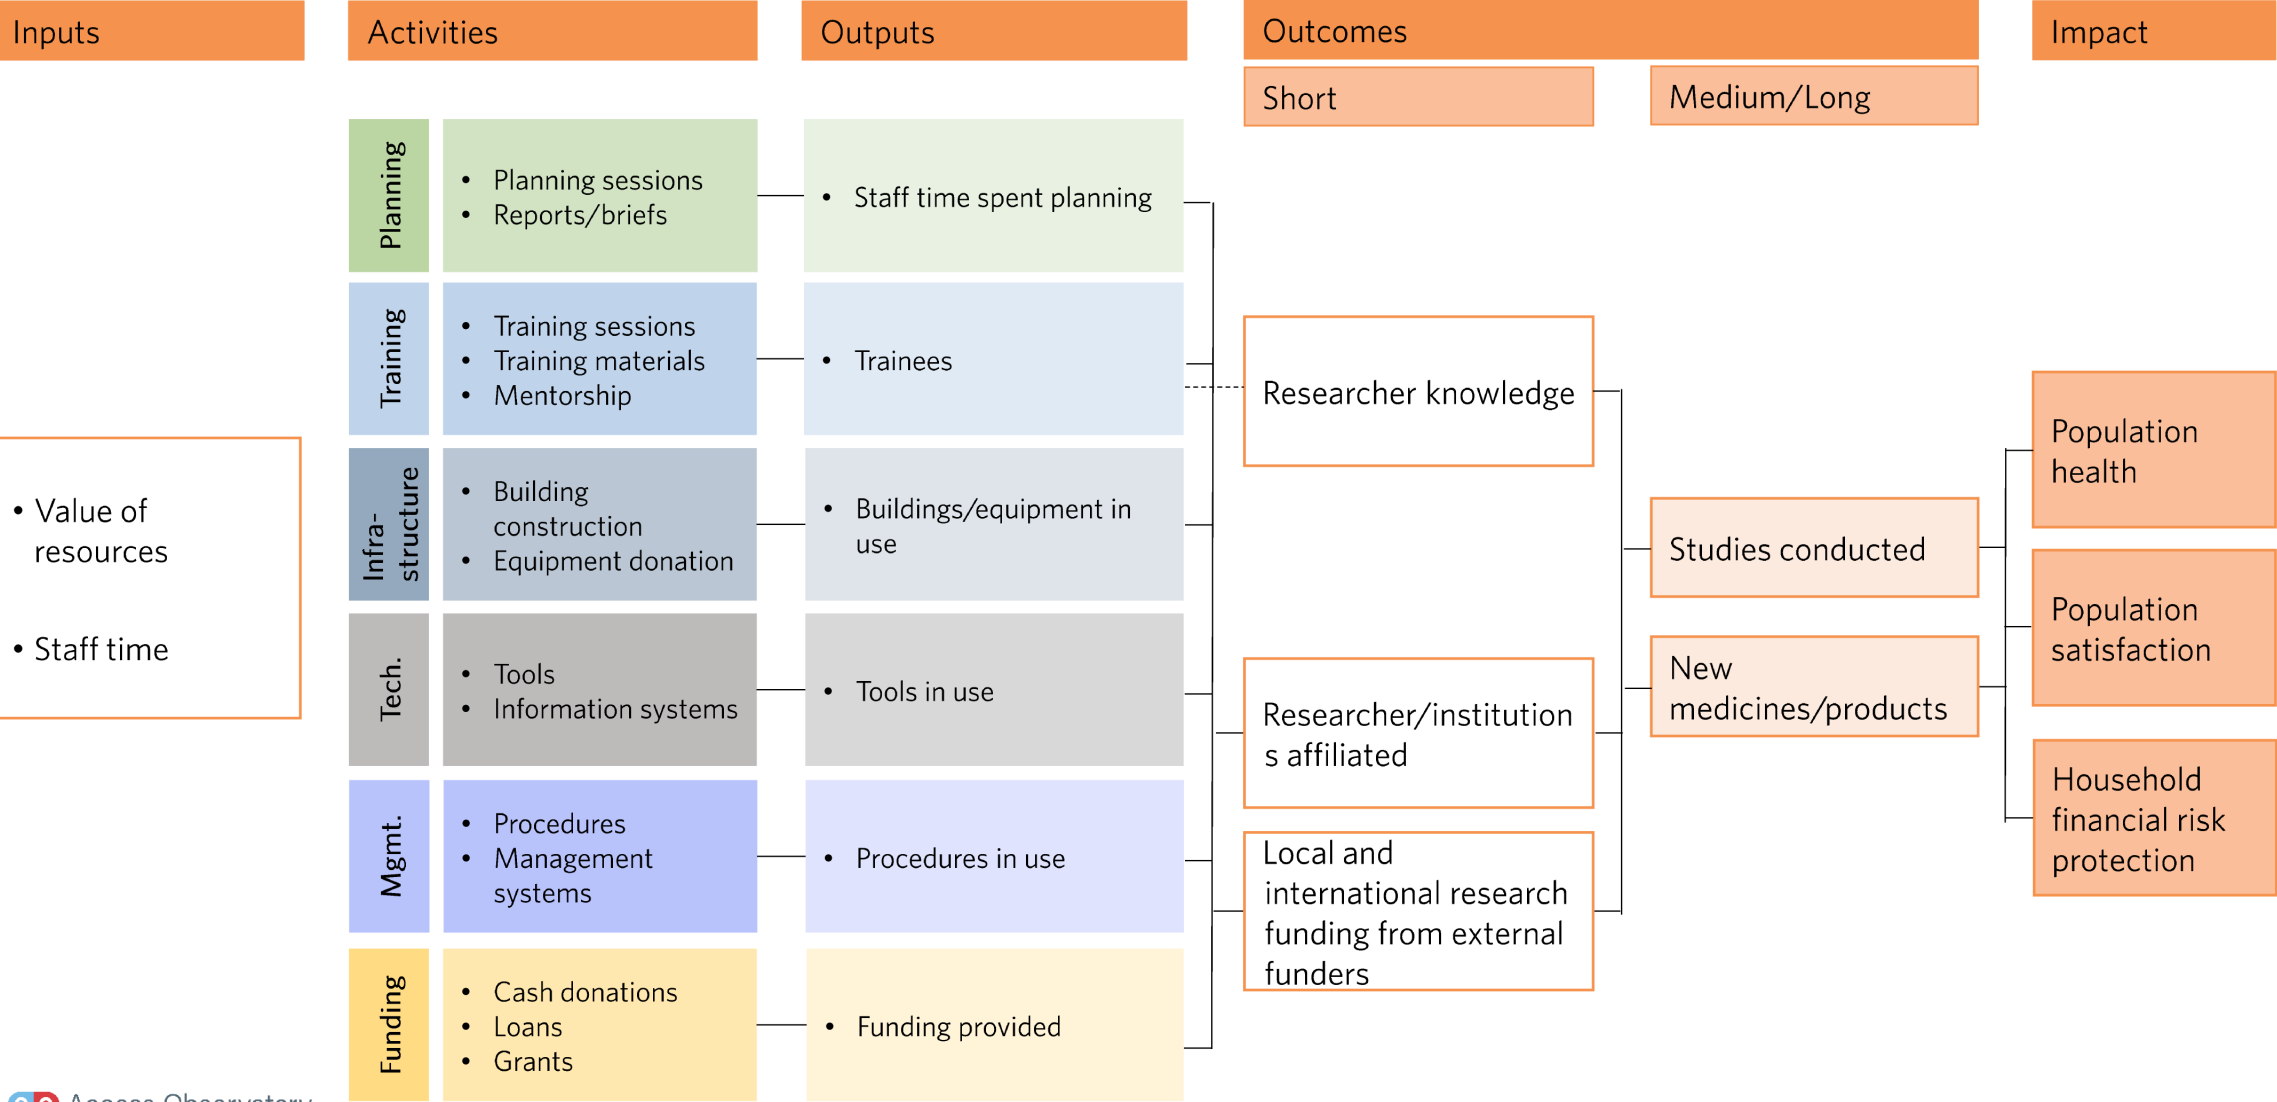

1. Manufacturing
2. Product Development Research
3. Licensing Agreement

Strategy: Manufacturing
Definition: Programs designed to build capacity for medicine production.

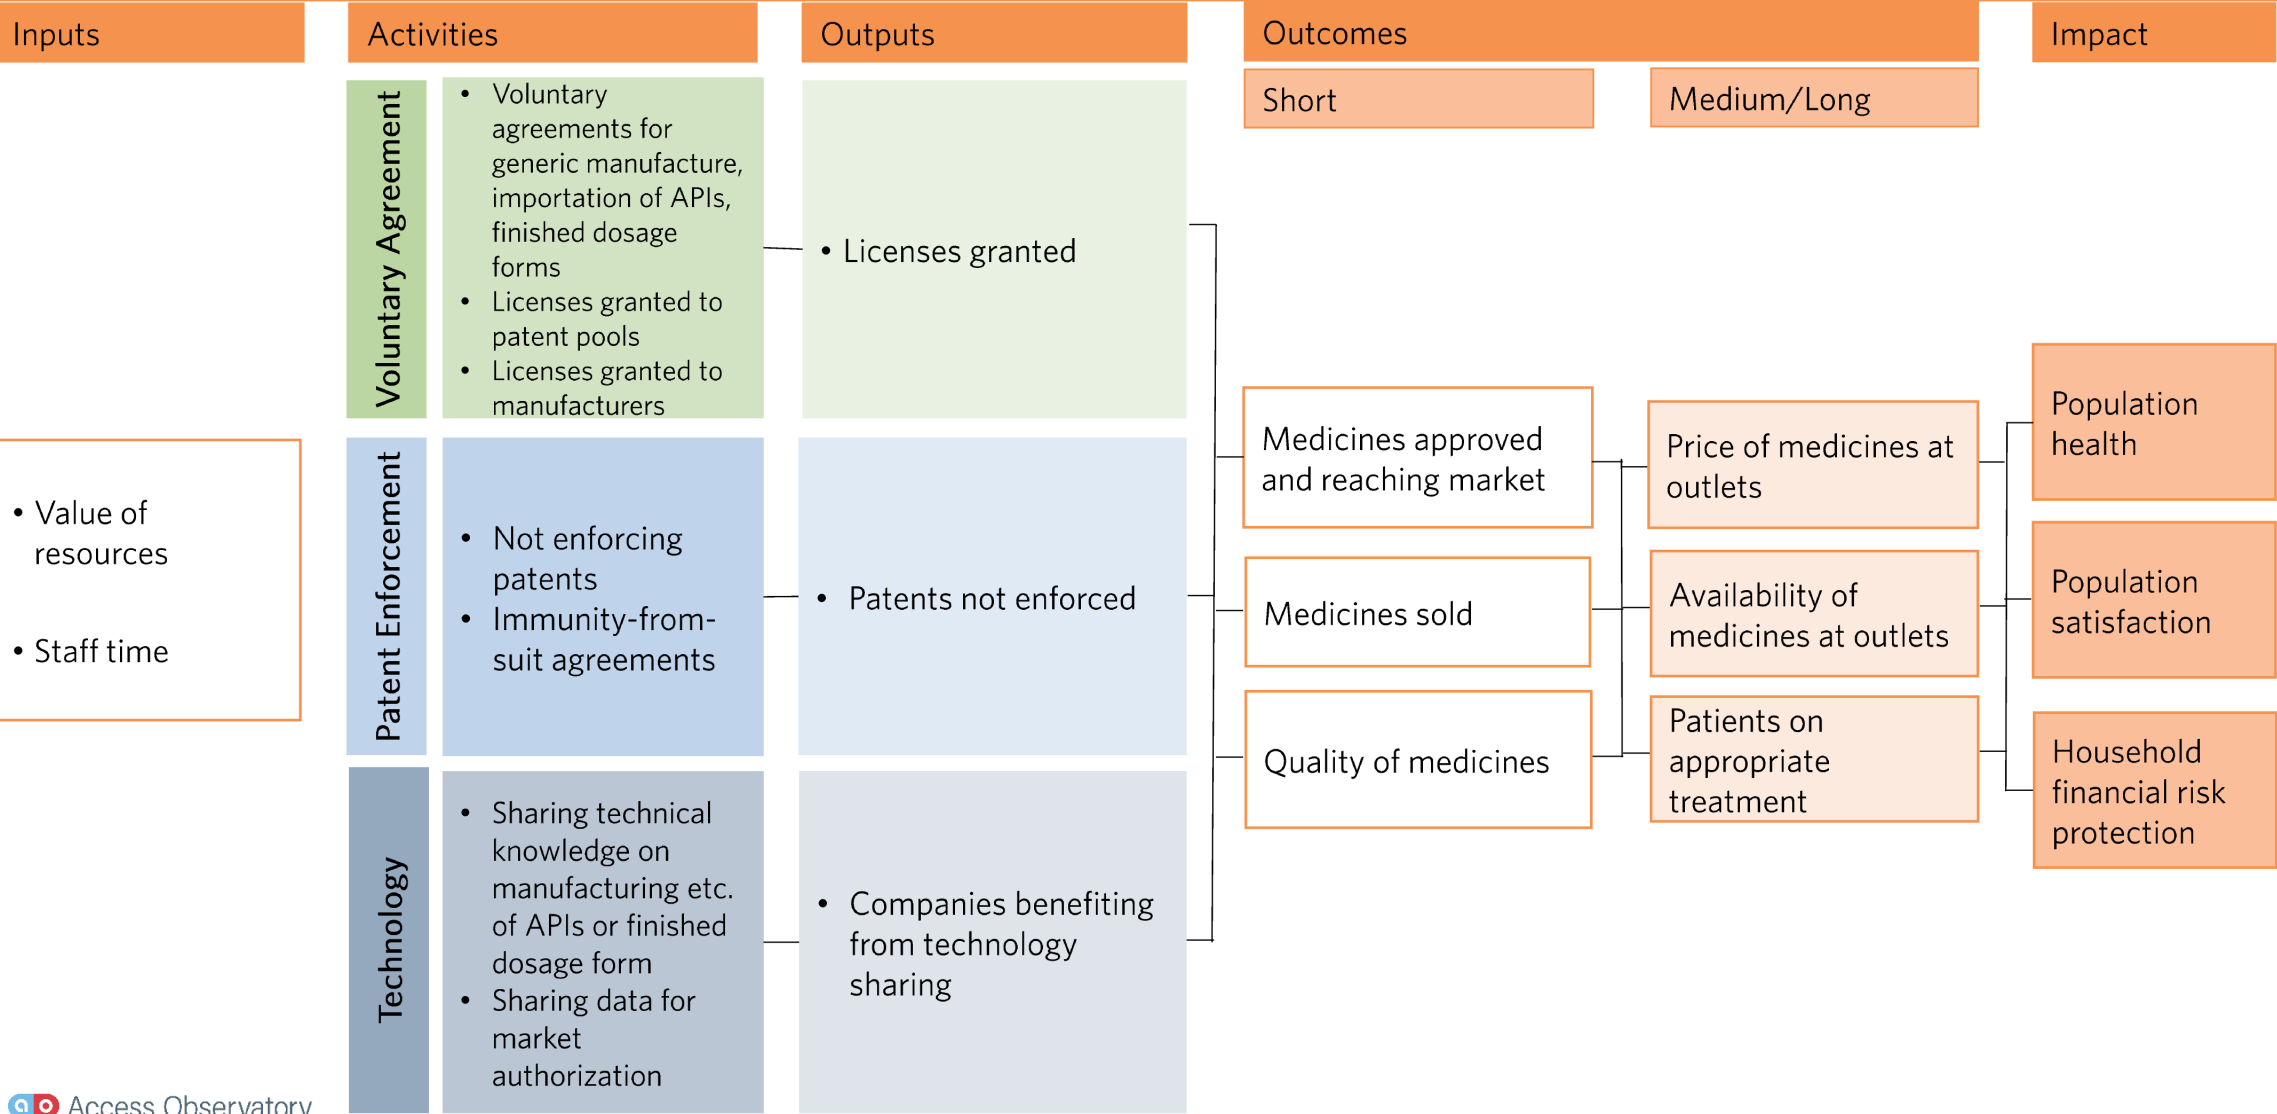

Strategy: Product Development Research

Definition: Programs designed to support product (e.g. drugs, devices, etc.) development research. Relevant research areas include bench science, pre-clinical and clinical trials, and post-marketing monitoring.

Strategy: Licensing Agreement

Definition: Programs designed to support local manufacture, importation, sale or use of medicines through legally binding relationships including voluntary agreements and technology sharing.

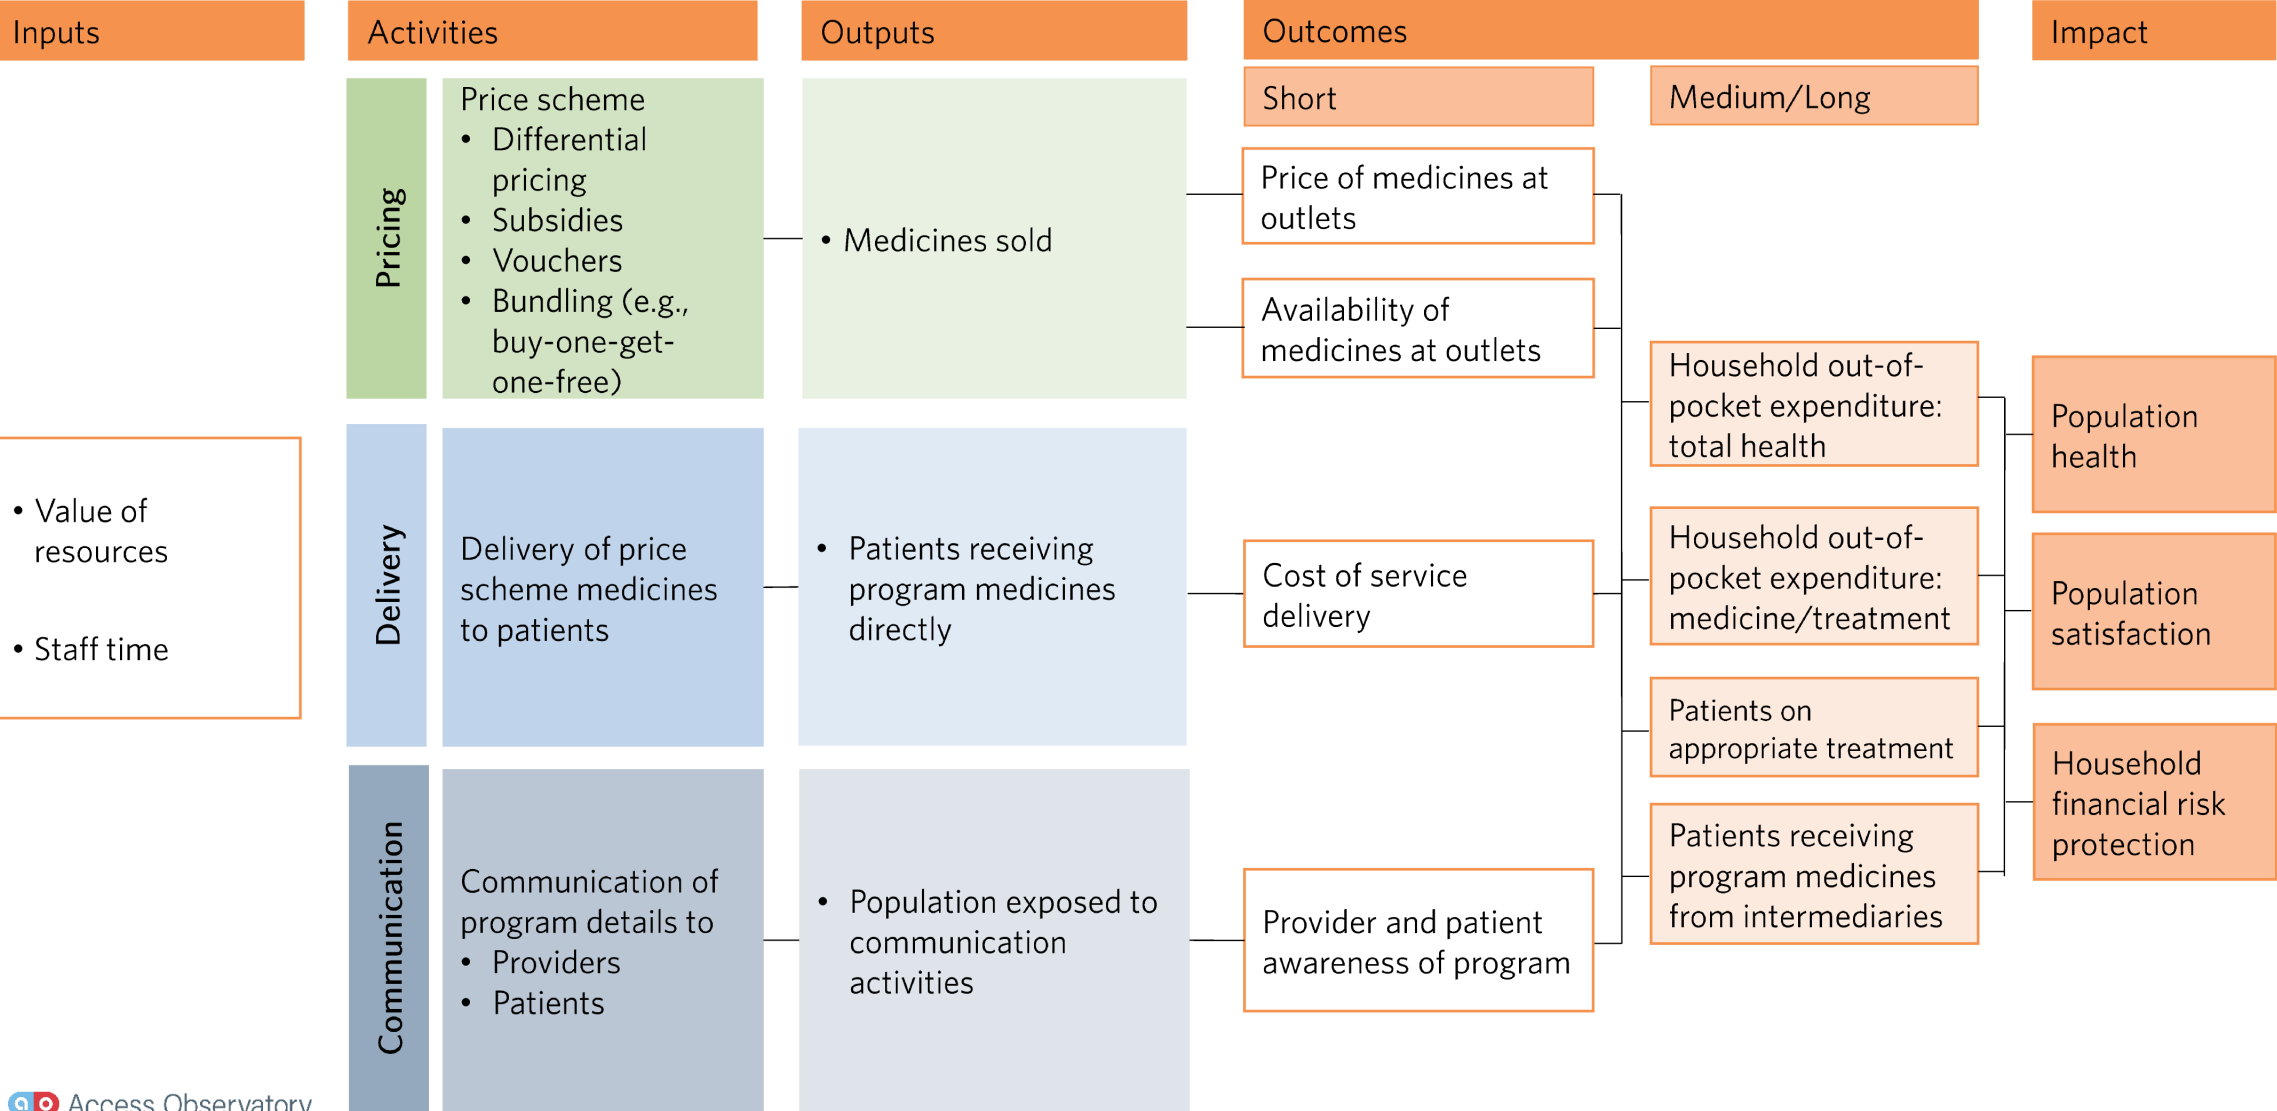

Price Strategies

1. Price Scheme
2. Medicine Donation

Strategy: Price Scheme

Definition: Programs designed to increase the affordability of medicines for individuals and healthcare systems through a reduction in the price via subsidies or other means (excluding donations).

Strategy: Medicine Donation

Definition: Programs designed to increase the availability and/or affordability of medicines through direct donation of medicines, and other healthcare products, to countries or health institutions or non-governmental organizations. Does not include compassionate access programs.
