Supplementary material BMJ Global Health

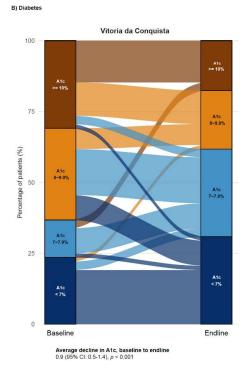

Supplementary File 7 – Brazil endline results

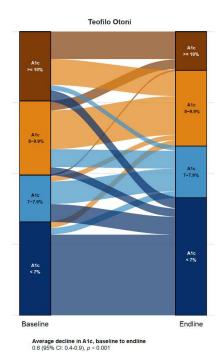

Percentage point change in meeting treatment targets (in blue)
10.5 (95% CI.7.8-13.2), p < 0.001

3.8 (95% CI. 0.5-7.2), p < 0.05

Patient shifts in categories between baseline and endline based on biometric readings for hypertension (A) and diabetes (B). The height of each column reflects 100% of patients at each time point (baseline and endline), while the categories within each column represent the percentage of patients in each category at baseline and endline. Patient groups are color-coded by their categorization at endline (right column per site) and flow from their categorization at baseline (left column per site).
