IMMUNISATION MAKES YOUR CHILD'S IMMUNE SYSTEM STRONGER
TO PROTECT YOUR CHILD, THEY NEED TO BE IMMUNISED BEFORE THEY COME INTO CONTACT WITH DISEASES.

- **Tuberculosis**
- **Pneumonia**
- **Severe vomiting**
- **Guillain-Barré**
- **Breathing problems**
- **Meningitis**
- **Whooping cough**
- **Measles**
- **Pneumonia**
- **Liver infection**
- **Cancer**
- **Immunisation makes your child’s immune system stronger than ever**

WHAT TO DO AT HOME

- Give your child regular fluids, small frequent bottles, or breast feed.
- If your child has a fever, make sure they are not too hot, and you give paracetamol (check the label for correct usage).

VACCINE COMMON SIDE EFFECTS
