

Supplementary material for manuscript: *Is being a left-behind child associated with an increased risk of self-poisoning in adulthood? – findings from a case control study in Sri Lanka*

Supplementary figure 1 – Participant recruitment for cases and controls

Supplementary material for manuscript: *Is being a left-behind child associated with an increased risk of self-poisoning in adulthood? – findings from a case control study in Sri Lanka*

Supplementary table 1 - Adjusted and sex-stratified associations of parental emigration and hospital presentation for self-poisoning in adulthood (Community controls)

		n(%)			
		Cases	Controls	Model 1	Model 2
Overall	Parental migration				
	No	178 (74.5)	321 (78.3)	1	1
	Yes	61 (25.5)	89 (21.7)	1.09 (0.74, 1.60)	1.08 (0.72, 1.60)
	Which parent migrated?				
	No migration	178 (74.5)	321 (78.3)	1	1
	Maternal	36 (15.1)	55 (13.4)	1.05 (0.66, 1.68)	0.95 (0.59, 1.55)
	Paternal	21 (8.8)	30 (7.3)	1.08 (0.59, 1.97)	1.24 (0.67, 2.29)
Both	4 (1.7)	4 (1.0)	1.65 (0.41, 6.73)	1.71 (0.41, 7.21)	
Males	Parental migration				
	No	83 (79.8)	129 (77.7)	1	1
	Yes	21 (20.2)	37 (22.3)	0.76 (0.41, 1.42)	0.65 (0.34, 1.24)
Females	Parental migration				
	No	95 (70.4)	192 (78.7)	1	1
	Yes	40 (29.6)	52 (21.3)	1.36 (0.84, 2.23)	1.44 (0.87, 2.38)

Model 1 – adjusted for age and sex

Model 2 – adjusted for age, sex, ethnicity, religion, childhood SEP

Supplementary material for manuscript: Is being a left-behind child associated with an increased risk of self-poisoning in adulthood? – findings from a case control study in Sri Lanka

Supplementary table 2 - Adjusted and sex-stratified associations of parental emigration and hospital presentation for self-poisoning in adulthood (All available data)
